Erectile dysfunction and urinary incontinence can take a mental and physical toll.1-3

Veterans deserve every opportunity to live a healthy, active lifestyle. You have served our country. But no matter the length or branch of service, veteran or civilian, men can experience erectile dysfunction (ED) and stress urinary incontinence (SUI) in association with other diseases (diabetes, cardiovascular disease) or as a result of prostate cancer treatment.4-12

These conditions can impact your relationships and affect your self-confidence. The good news is that there are treatment options that can help.

Becoming Whole Again

AMS 700™ Series Inflatable Penile Prosthesis

Caution: U.S. Federal law restricts this device to sale by or on the order of a physician.

Your doctor is your best source for information on the risks and benefits of the AMS 700™ with MS Pump™ Inflatable Penile Prosthesis. Talk to your doctor for a complete listing of risks, warnings and important safety information.

The AMS 700™ with MS Pump™ Inflatable Penile Prosthesis is intended for use in the treatment of male erectile dysfunction (impotence) and curvature or scarring. Some AMS 700 devices contain an antibiotic (InhibiZone™ Antibiotic Surface Treatment). The device may not be suited for patients who are allergic to the antibiotics contained within the device (rifampin, minocycline or other tetracyclines) or have systemic lupus.

Potential risks may include device malfunction following an additional surgery. device migration potentially leading to exposure through the tissue, severe pain following device implantation, inability to urinate. unintended inflation of the device and pain/infections. MH-545611-AA

AMS 800™ Urinary Control System

Caution: U.S. Federal law restricts this device to sale by or on the order of a physician.

Your doctor is your best source for information on the risks and benefits of the AMS 800 Urinary Control System. Talk to your doctor for a complete listing of risks, warnings and important safety information.

The AMS 800 Urinary Control System is intended for use in the treatment of male stress urinary incontinence (intrinsic sphincter deficiency) following prostate surgery.

Men with diabetes, spinal cord injuries or skin infections may have an increased risk of infection. Implantation may result in penile shortening, curvature or scarring. Some AMS 700 devices contain an antibiotic (InhibiZone™ Antibiotic Surface Treatment). The device may not be suited for patients who are allergic to the antibiotics contained within the device (rifampin, minocycline or other tetracyclines) or have systemic lupus.

Potential risks may include device malfunction following an additional surgery. device migration potentially leading to exposure through the tissue, severe pain following device implantation, inability to urinate. unintended inflation of the device and pain/infections. MH-545411-AA

AdVance™ Male Sling System

Caution: U.S. Federal law restricts this device to sale by or on the order of a physician.

Your doctor is your best source for information on the risks and benefits of the AdVance Male Sling System. Talk to your doctor for a complete listing of risks, warnings and important safety information.

The AdVance Male Sling System is intended for the treatment of male stress urinary incontinence (SUI).

Potential risks may include inability to urinate (urinary retention), return to incontinence and pain. MH-545855-AA

Erectile Dysfunction

What is erectile dysfunction?
Erectile dysfunction (ED) is defined as the persistent inability to achieve or maintain a penile erection sufficient for satisfactory sexual performance. It can affect men of all ages and is a growing problem among veterans.

What causes ED?
ED happens when blood flow to the penis is limited or nerves are damaged. The cause can be physical, psychological or a combination of both. Physical causes include diabetes, vascular disease, side effects of medications and prostate cancer treatment.

What are my treatment options?
Whatever is causing your ED, there is a treatment option that can provide a satisfying solution. Oral medications are a common first step, but they don't work for everyone or may stop working. Other treatments include vacuum erection devices, injections and intraurethral suppositories. A penile implant, like the AMS 700™ Implant, is designed to be a permanent solution for men suffering from ED and can provide an erection whenever desired, for as long as the man and his partner desires.

Stress Urinary Incontinence

What is stress urinary incontinence?
Incontinence is defined as any involuntary leakage of urine. Male stress urinary incontinence (SUI) is usually caused by a damaged or weakened sphincter. The sphincter is the circular muscle that controls urine flow out of the bladder. When damaged, this muscle cannot squeeze and close off the urethra; the result is urine leakage.

What causes male SUI?
SUI is a common side effect of prostate cancer treatment, such as surgery (radical prostatectomy) or radiation. It can also be a symptom from enlarged prostate (BPH) surgery, pelvic trauma or a neurological condition such as spina bifida.

What are my treatment options?
Most cases of stress urinary incontinence can be cured or improved. Your doctor may recommend changes to your daily routine, such as avoiding caffeine and alcohol, limiting fluid intake and following a voiding schedule. Some men cope by using absorbent pads and protective undergarments. Others use penile clamps or catheters to try to prevent urine leakage. Long-term treatment options, such as the AMS 800™ Urinary Control System and the Advance™ Male Sling System, can provide proven, discreet bladder control.

Veterans Choice Program

With the Veterans Choice Program, no man is left behind
The Veterans Choice Program (VCP) allows eligible veterans to receive care in their own communities, or at a facility that specializes in treating SUI and ED. This is great news for veterans who can’t access a specialist, face long wait times or have difficulty traveling to the nearest VA medical center.

Eligibility requirements
If one or more of the following conditions apply, you may be eligible to receive care through VCP.

- VA can’t provide the services required
- VA can’t provide an appointment within 30 days
- You live more than 40 miles (driving distance) from the nearest VA medical facility
- You have to travel by air, boat or ferry to get to the nearest VA medical facility
- You face an excessive burden in traveling to the nearest VA medical facility

Take the next steps
You must receive prior authorization from the VA to receive care from a VCP provider. To find out if you are eligible, call 866-606-8198 or visit www.va.gov/opa/choiceact.

- Go to EDCure.org or FixIncontinence.com to find a VCP participating specialist in your area. More than 250 Veterans Choice providers are listed on EDCure.org, and over 150 are listed on FixIncontinence.com.
- Call the VA to schedule an appointment and request the VCP specialist found on EDCure.org or FixIncontinence.com. The VA makes the final decision about who can provide care.

Over the last 40 years, more than 180,000 patients around the world have received an artificial urinary sphincter like the AMS 800 System.

"One of the great benefits of the implant is that it’s natural; you control the erection, it can last as long as you want, and you can have it whenever you want. My biggest regret is that I waited eight years from the time I had a prostatectomy until I got the implant."

– Danny, US Marine Corps, Vietnam
