AdVance™ Male Sling System
The minimally invasive solution for male stress urinary incontinence

Help your patients find happiness.

94% of patients would recommend the AdVance Sling procedure to a friend1

Consider the AdVance™ Male Sling System to restore normalcy and renew confidence.

Urologist benefits

- Efficient procedure
  - Minimal mesh²
  - Standard tensioning³
- Established outcomes
  - More than 10 years of clinical use²
  - 83% dry rate in a study of 399 patients over 7 years⁴

Patient benefits

- Minimally invasive procedures allowing most patients to resume normal, daily activities 1 - 2 weeks after their procedure or at your discretion³
- Patients may be continent immediately following their procedure⁵
- AdVance Sling has no moving parts and operates passively, therefore patient manual dexterity and mental acuity are not criteria for exclusion⁵
- Can be used in combination with the AMS 700™ Inflatable Penile Prosthesis⁶
- If needed, the transition to an AMS 800™ Urinary Control System does not usually require mesh excision⁷
Mechanism of action

The sling is placed flat along the corpus spongiosum

The AdVance™ Male Sling is then tensioned, thereby repositioning the bulbous urethra and resulting in an increased functional urethral length and a backdrop of support to the distal membranous (sphincteric) urethra during stress events

Patient risks

- Side effects include pain, inflammation, urethral or tissue damage, bleeding and irritation at the wound site and urinary retention
- Contraindications include patients with urinary tract infections, blood coagulations disorders, compromised immune systems, renal insufficiencies or upper tract obstructions
- Patients should abstain from heavy lifting, strenuous exercise, and intercourse for a minimum of six weeks
- Acute inflammatory tissue reaction and transitory local irritation have been reported with the use of absorbable suture
